| Notes | * Zeus RTA glass is thinner. Not all 25x20 glasses will fit. | | | | | | | | | | | | | | | | | | | |
| | My personal observations: | | | | | | | | | | | | | | | | | | | |
| | Height: I have successfully used a 1mm shorter glass by stacking 2 or 3 extra o-rings on its ends. This was with OBS Engine by I guess it may work with other tanks. Also think that a glass up to 0.5mm taller would fit without creating a relevant gap on the chimney. So, that means I'd take a chance with any glass from 1mm shorter to 0.5 taller in case I don't find the original one. | | | | | | | | | | | | | | | | | | | |
| | Diameter: I think diameter is not something we can adapt so easily. I'd recommend finding the perfect size for your tank, or, trying a glass with 0.5 difference, at most. Don't forget the diameters here are for the regular flat glass, not the bubble one. | | | | | | | | | | | | | | | | | | | |
| | Thickness: A non-original glass even with exact external dimensions may not fit due different thickness (as noted on the Zeus RTA above). | | | | | | | | | | | | | | | | | | | |
| | Bottom line is: | | | | | | | | | | | | | | | | | | | |
| | 1. try to find the original class for your tank for purchase | | | | | | | | | | | | | | | | | | | |
| | 2. if you can't, look for a compatible glass (with the same dimensions on the matrix above) | | | | | | | | | | | | | | | | | | | |
| | 3. if you still can't find it, try something up to 1mm shorter, 0.5 taller and/or 0.5 fatter/thinner. | | | | | | | | | | | | | | | | | | | |

Notes
 * Zeus RTA glass is thinner. Not all 25x20 glasses will fit.
 ** Tobaco 20mm Super Tank has thick glass. Outer diameter 24 and inner diameter 21mm
 *** KW mesh Mini tubes without top cap are identical for Driew DL RDTA / DL FL / MTL FL 24

My personal observations:

Height: I have successfully used a 1mm shorter glass by stacking 2 or 3 extra o-rings on its ends. This was with OBS Engine by I guess it may work with other tanks. I also think that a glass up to 0.5mm taller would fit without creating a relevant gap on the chimney. So, that means I'd take a chance with any glass from 1mm shorter to 0.5 taller in case I don't find the original one.

Diameter: I think diameter is not something we can adapt so easily. I'd recommend finding the perfect size for your tank, or, trying a glass with 0.5 difference, at most. Don't forget the diameters here are for the regular, flat, glass, not the bubble one.

Thickness: A non-original glass even with exact external dimensions may not fit due different thickness (as noted on the Zeus RTA above).

Bottom line is:

1. try to find the original glass for your tank for purchase
2. if you can't, look for a compatible glass (with the same dimensions on the matrix above)
3. if you still can't find it, try something up to 1mm shorter, 0.5 taller and/or 0.5 fatter/slimmer.

|----------------------------------------------------------------------------------------------------------------------------------------------------|--|
| TFV8 Big Baby Beast for RBA is 23.3 mm in height | |
| The TFV9 also works with Baby Beast RBA using Big Baby RBA glass. Top o-ring was really tight so I swapped in Big Baby rings top and bottom. | |
| I have the TFV8 Baby Beast and TFV12 Baby Prince @ 19.3 and 22.3 for RBA. That matches the 3mm difference of the Big Baby and TFV9 regular and RBA | |
| Looking for Destiny RTA and Rebirth RTA Bubble plastic (PC or Ultem or Acryl) tube. Which compatible? | |
| | |
| 21mm (height) x 24mm (width) Glass is suitable for Vapor Storm Hawk tank | |
